Java

Introduction to Java :-

*) Java is high level, object oriented programming language.

*) Developed by "Sun MicroSystem" in 1995.

*) Invented by canadian scientist "James Gosling" in 1991 under Sun Microsystem.

*) Java is called as "Just Another Virtual Application / Architecture" as a backronym by some programmers jokingly.

*) In 1991, Java is named initially as "OAK"

It is mostly used for building desktop applications, web applications, Android apps and enterprise system

*) In 1995, they changed name to "Java" (copyright)

Features of java :-

1. OOP

*) Java was owned by "Sun Microsystem" now, it is under "Oracle"

2. Robust & Secure

3. Rich API & Standard Libraries

4. Open-Source Libraries

5. Platform Indepence

6. Multithreading & Concurrency

7. Frameworks for enterprise & Web Development

8. Maintainability & Scalability

*) Java is simple without pointers & Multiple inheritance.
*) Supports OOP concepts to create Modular & reusable codes.
*) Java can run on any OS with JVM.
*) Java ensures reliability & security with strong memory management & exception handling
*) Java allows concurrent execution of multiple tasks for efficiency.
*) Java provides extensive built-in libraries for various programming needs.
*) Java supports frameworks that simplify enterprise & web application development.
*) Java has wide range of Libraries to extend funtionalities and speed up development.
*) Structured design allows easy maintenance & scalability.
